STEAM RISES. YOUR STANDARDS SHOULD TOO.

Lighter. Stronger. Quicker. More Efficient.

When it comes to condensate return and boiler feed systems—stainless steel rises far above the rest. That's why Fabtek has made stainless steel the standard.

Some companies have been doing the same thing for over *100 years*, but not us. We pay attention, learn from our experiences, and continuously evolve. Because we believe you deserve better, and that's exactly what we deliver.

**VERTICAL BOILER
FEED SYSTEM**

**HORIZONTAL BOILER
FEED SYSTEM**

**CONDENSATE
RETURN SYSTEMS**

**VACUUM
SYSTEMS**

EXCEPTIONAL VALUE | EXTRAORDINARY QUALITY

WHY STAINLESS STEEL?

At Fabtek, we already know stainless steel is the ideal material for steam heating. But we believe knowledge is power, and we think power should be shared. So, here's what we know.

STAINLESS STEEL IS:

- + **Non-corrosive**, which means it lasts longer
- + **Lighter-weight**, so it's easier to work with
- + **More flexible** than cast iron and can adapt to changes in floor plans and layouts
- + **More thermodynamically efficient** by collecting hot condensate and pumping it back to the boiler, which speeds up the process and saves energy
- + **Competitively priced** with carbon steel and cast iron. It's a premium product without a premium price tag
- + **Easier to source** and less impacted by supply-chain issues than cast iron

With that in mind, it's clear that stainless steel is no longer just for niche projects—it's the way of the future, and the most logical choice for steam heating today.

WHY FABTEK?

Simply put, we think you deserve more. What we consider the standard, the others consider an upgrade. For example, at Fabtek, we:

- + Offer TEFC motors instead of ODP, and Nema 3R control panels instead of Nema 1.
- + Machine all of our accessories, including gauge glass assemblies, isolation valves, preheat assemblies, and more, in-house using 304 grade stainless steel.
- + Turn submittal drawings around in 2-3 days, while the competition can take more than twice as long. We can also provide 3D models.
- + Build stainless steel parts, including pump and motor assemblies, that can fit any existing system.
- + Provide warranties that far exceed the industry, including 20 year warranties on receivers and 5 years on pumps, while others offer just 12-18 mos.

And, beyond all of that, we really care about people. We understand that in this industry, when equipment is down, it is an emergency, and we treat it as such. We are quick to respond and pride ourselves on customer service, so you can be confident we'll tackle any challenges that arise side by side.

Ready to see why we're so obsessed with stainless steel?
